

Scrapeater™

A new breed of waste disposer

Meet the Scrapeater

The new Robinhood Scrapeater is robust, durable and engineered to consume kitchen scraps with minimum fuss and maximum grunt.

Both models include extra noise insulation and the QA model comes with an air switch for added safety.

Performance you can trust

- Intelligent motor construction allows maximum torque on start up and high speed during operation.
- Triple-sealed sink flange eliminates any under-sink leaks.
- Rubber plug hole guard reduces noise and prevents messy splash backs.
- Stainless steel swivel impellers reduce risk of jams.

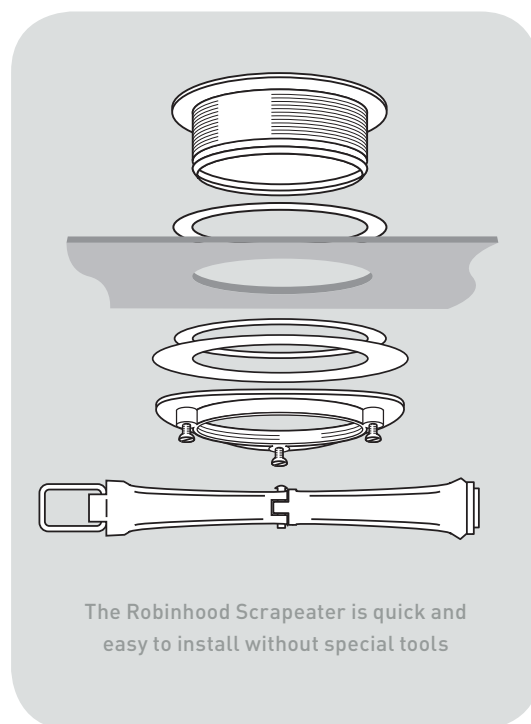

Tough enough to last for years

- High quality cast stainless steel grinding components.
- Overload switch protects the motor if you over feed your Scrapeater.
- Tough, polymer outer casing protects your Scrapeater.

Quick and easy to install without special tools

- The Scrapeater sink flange and its seals screw easily into position on a standard waste disposer hole. The body of the Scrapeater simply attaches to the flange with a hinged clamp.
- Standard pipe connections fit directly onto your S&P trap.
- Plugs directly into the undersink power point without the need for wiring.

Model	Horsepower (Watts)	Noise Insulation	Air Switch
